Homa Zadeh

The growing popularity of dental implant therapy has ushered in an era marked by an increasing incidence of biological, technical, and esthetic complications. Dental professionals now face a rising number of patients seeking assistance for implant-related issues that demand both surgical and prosthetic interventions.

Peri-implantitis, an inflammatory condition affecting peri-implant tissues, is the leading cause of implant loss. By delving into the root causes, effective prevention strategies, and cutting-edge treatment options for peri-implantitis, this course equips participants with the knowledge and expertise essential for ensuring the enduring success of dental implant treatments.

**Educational Objectives:**

1. Biological Basis of Peri-implantitis
2. Risk Factors and Implement Prevention Strategies
3. Case selection for treatment versus explantation
4. The Role of Soft Tissues in Peri-implantitis
5. Diagnosis of Peri-implantitis
6. Surgical Management of Peri-implantitis
  - Resective pocket reduction
  - Regenerative therapy for correction of osseous defects

- Soft tissue augmentation in the management of peri-implantitis

7. Interdisciplinary Collaboration: prosthetic considerations

**Hands-on workshop:** The simulated exercises are intended to provide practical experience with important strategies in the management of peri-implantitis:

- Defect selection for resective vs regenerative approaches
- Implant surface decontamination
- Flap designs and VISTA tunneling for surgical access for bone and soft tissue regeneration
- Preparation of biologically based composite bone graft material
- Fibrin Immobilization Vestibular Extension (FIVE) for the treatment of peri-implantitis

Upon concluding this course, dental professionals will be better equipped to navigate the entire spectrum of dental implant complications, with a strong focus on peri-implantitis. They will depart with a comprehensive toolkit, invaluable insights, and a heightened level of expertise necessary to provide the highest standard of care to their patients and ensure the long-term success of dental implant treatments.

Tuition	16 CE Units
In-person Lecture/workshop:	
	\$1495 (before June 1)
	\$1695 (before July 1)
	\$1895 (after Aug 1)
<i>Free with Gold Membership</i>	
Remote Lecture: \$595 (before June 1)	
	\$695 (before July 1)
	\$795 (after Aug 1)
<i>Free with Gold Membership</i>	

## Annual Membership Elevate Your Expertise

Our Annual Membership is designed for dental professionals eager to expand their skills and stay at the forefront of clinical dentistry. This comprehensive 12-month membership offers access to all in-person lectures and hands-on workshops\*, along with a complete library of on-demand online courses. Whether you're looking to enhance your knowledge in advanced techniques, explore emerging technologies, or refine your practice, our Annual Membership provides unlimited access to the resources and expert guidance you need.

**Gold Membership Fee Options\*:**

- One-time payment of \$8,995
- Monthly payment plan of \$895 per month\*\* (Potential saving: \$17,000)

**Join our Gold Membership** to unlock a year of transformative learning experiences and elevate your practice to new heights!

\* Gold membership access excludes IV sedation course. For Molar endo course and John Ingle Endo Symposium gold members receive 10% discount

\*\*12 Month Annual Commitment.

**Silver Membership Benefits:**

This 12-month membership offers access for remote participation to all live lectures with possibility of participating in the course at a later time on an on-demand basis. You are also provided access to the entire library of on-demand online courses.

**Silver Membership Fee Options†:**

- One-time payment of \$3,995
- Monthly payment plan of \$395 per month\*\* (Potential saving: \$7000)

† Silver membership access excludes IV sedation course, Molar Endo course and John Ingle Endo Symposium. \*\*12 Month Annual Commitment
